

**Mark Jenner** is a Systems/Regulatory Economist providing solutions through the strategic utilization of all kinds of biomass, new market development of food, fiber and fuels, and streamlining regulations. He has more than 25 years experience in implementing bio mass based cutting-edge innovations such as:

- Livestock facilities as rural development solutions (energy and environment)
- Biomass energy/compost market development (preliminary feasibility studies)
- Local biomass feedstock inventory assessments (BioTown, USA™ Sourcebook)  
[www.biotownusa.com](http://www.biotownusa.com)
- 2.4 MW biomass power plant development – gasifier/fast pyrolysis/anaerobic digester (BioTown, USA™)

He possesses additional technical expertise in production contract economics, biotechnology, aquaculture, data quality and collection. He has worked as an Economist for the American Farm Bureau Federation where he created documentation of grower benefits and costs of agricultural production contracts, development of market benefits to fish farmers by establishing property-rights protection for farm-raised fish; and also guided USDA and Census of Agriculture on most effective farm, aquaculture and manure data collection.

Mark Jenner has a Phd in Agricultural Economics from the University of Missouri. He was a Peace Corps Volunteer to Nepal. He also has been the owner operator of a hog farm.
